

Remediation validation results

Final test · fresh, previously unseen documents

Nine documents were run through AccessiblePDF in a single pass and validated with the PAC accessibility checker. Scores reflect first-pass output on files the engine had not seen before.

Documents tested	Perfect PAC (100)	Average PAC score	Issues remediated
9	8 / 9	98.1	99.9%

1,275 of 1,276 detected accessibility issues remediated across the set.

Per-document results

Document type	Issues remediated	PAC	Score
Technical e-book	303 / 303	100	
Government bid / procurement package	213 / 213	100	
Product datasheet	205 / 205	100	
Professional résumé	204 / 204	100	
Training booklet	188 / 188	100	
Structured form / statement	108 / 108	100	
Government RFP template	38 / 38	100	
Construction contract	11 / 11	100	
Reference list / table	5 / 6	83	

Screen-reader verification

Validator pass alone does not guarantee a usable document. Each remediated file was also reviewed in the NVDA screen reader to confirm correct reading order, table navigation, and heading structure. Preview captures are provided separately and appended to this report.

Method: each document was processed in a single pass with no iteration, then validated with the PAC reference checker. One additional document was excluded from this set because its source file was corrupt and would not open. Document names have been replaced with document types to protect submitter privacy.
